Strategic Proposal for Sovereign Equity Participation in Antarctic Ice Harvesting and Global Climate Stabilization

Heads of State and Cabinet Ministries Responsible for:

Climate and Environmental Affairs

Water and Natural Resources

Economic Development and Infrastructure

Public Health and Social Services

I. Esteemed Leaders

1. In service to our shared global imperative to protect Earth's climate systems and safeguard long-term access to clean water, Eugenix P.S.A.—an ethnic company representing the Arcticus Blancus climatic ethnicity and its planetary stewardship program—respectfully submits the following proposal.

2. We invite sovereign states to acquire equity shares in Eugenix P.S.A.'s Antarctic Ice Removal and Climate Restoration Program, a transformative initiative that combines climate science, environmental justice, and resource diplomacy. This submission includes Eugenix P.S.A. with Arcticus Blancus general outline of climatic goals, ice pricing tiers, and sovereign rights to shares based on population scaling.

II. Global Scope and Sovereign Rights

3. Participating states will secure proportional access to Antarctic ice resources calculated by population figures ensuring long-term supply of mineral-rich, contaminant-free drinkable water. Ice allocations support domestic demand while stabilizing global hydroclimatic systems through geomagnetic engineering. Each state that purchases stock option is entitled to 1 km³ of ice per every 1000 residents to supply water to own sovereign state residents.

III. Global Climate Benefits and Shareholders Sovereign Economic Control

4. Shareholder contributions will be directed toward:

- a. Financing geomagnetic field research
- b. Constructing geomagnetic dams in the Arctic and Antarctic:
 - i. **Two Arctic Geomagnetic Dams**; one temporary dam in Canada to modulate geomagnetic flux, and one permanent dam north of Greenland to completely stabilize atmospheric patterns and prevent complete rain and xero cycle collapse.
 - ii. **One Antarctic Geomagnetic Dam**, constructed after strategic ice-removal operations are completed to restore global climate balance and improve freshwater availability.
- c. These installations aim to safeguard indigenous territories, enhance navigability, and secure long-term ecological resilience.

5. This infrastructure enables magnetic restoration that supports:

- a. Stable rain cycles across continents
- b. Reduction in UV penetration
- c. Cooling of atmospheric temperatures
- d. Cloud and moisture generation
- e. Longer natural water absorption periods
- f. Other benefits based on the geomagnetic protection increase

6. Equity shareholders maintain full sovereign economic control over the logistic operations that include:

- a. Ice harvesting and processing
- b. National transport and distribution models
- c. Water quality standards and usage policy
- d. Fair and sustainable pricing of drinkable water until rainfall cycles restore aquifer systems naturally

IV. Eugenix® P.S.A. Share Cost, Value, and Allocation

- 66 7. All share related costs that include the rules of acquisition with deposits and rules of return of
67 rights are presented in the Eugenix® Business Plan and Investment Opportunity EN, key information
68 provided below:
- 69 a. The total planned volume of ice extraction is 10,000,000 km³, which is divided into
70 100,000 company shares of Eugenix® P.S.A.
- 71 b. One company share entitles the holder to 100 km³ of ice.
- 72 c. The price of 1 m³ of ice is calculated based on 100,000 m³ equaling 1 ounce of gold (Au
73 99.999%), priced at €3,000 per ounce, which equals €0.030 per m³ of ice.
- 74 d. Each share (100 km³ of ice) corresponds to 1 million ounces of gold (Au 99.999%).
- 75 e. At a price of 3,000 euro per 1 ounce of Au 99.999% gold, the cost of one share of Eugenix
76 P.S.A. amounts to 3 billion euro.
- 77 f. The total value of all 100,000 shares: €3 billion × 100,000 shares = €300 trillion euro.
- 78 g. *Pricing reflects lifetime rights to resources and climate engineering participation.*

79
80
81

V. Strategic and Ethical Alignment

- 82 8. This proposal aligns with key mandates from the **Indigenous and Tribal Peoples Convention**
83 **(C169)**, reinforcing ethnic participation in climate governance and resource equity. Participating
84 governments will advance environmental rights, strengthen water independence, and contribute to a
85 planetary legacy of ecological justice.
- 86
- 87 9. Eugenix P.S.A. supports and proposes new convention one key ethnic issues that protect ethnic
88 rights as part of the climate repair initiative. Eugenix has sent a request to ILO International Labor
89 Organization to convene new Tribal and Indigenous Peoples Convention notifying ILO with its request
90 about Eugenix P.S.A. climate initiatives. To ensure that Arcticus Blancus and other climatic communities
91 fully benefit, Eugenix P.S.A. have prepared and presented to the ILO:
- 92
- 93 a. **An Annex to the Antarctic Treaties**, embedding indigenous stewardship rights and cultural
94 preservation clauses that our shareholders will promote allowing Eugenix P.S.A. with Arcticus
95 Blancus and shareholders to begin its operations.
- 96 b. **Ethnic Hair Quantum Protections**, legal safeguards recognizing regional phenotypic hair
97 markers as instruments of ethnic identity and eligibility for employment priority within our
98 projects.

- c. **A Genocide Resolution Annex**, securing procedural pathways for all climatic ethnicities to claim territorial sovereignty, resource access, and economic parity—preventing ethnic and economic extinction and discrimination.

VI. Call for Discussion

10. We welcome the opportunity to present this initiative directly to your respective ministries or via diplomatic channels. Please find enclosed our supporting prospectus documentation. We are available for correspondence via secured email and encrypted video conferences. With highest consideration and urgency.

11. List of all attached Eugenix P.S.A. documents in two separate files A and B:

File A:
